1.0 WELCOME TO RPG AUSTRALIA OIL & GAS DIVISION

RPG Australia is an Australian-owned national manufacturer, supplier and fabricator of specialist heavy steel components across a number of industry sectors. Past projects have seen the organisation provide solutions tailored for the manufacturing, infrastructure, mining, renewable energy, agribusiness, petrochemical, Oil and Gas and related sectors throughout Australia and export markets. Offering a full suite of heavy steel processing capabilities, RPG Australia's key competitive advantage is anchored in its ability to offer fully integrated and tailored solutions to clients. RPG has the expertise and capacity to project manage all facets of our clients' requirements including: supply steel, cut, roll, bend, fabrication, surface protection and painting and site installation; incorporating value-added services to the finished product and prepare for delivery and installation to any metropolitan or regional area within Australia. All solutions are custom designed for clients' specific needs and manufactured to meet their exacting specifications.

RPG-Australia Oil & Gas Fabrication Facilities: Richlands and Dalby, QLD

Richlands Facility: 6400m² under roof fabrication shop

*Dalby- Blast Bay 40mL x 8mW x 8.5mH
Dalby- Paint Bay 40mL x 8mW x 8.5mH*

Dalby-under roof fabrication – 10,270m²

2.0 PROJECTS DELIVERY STATEMENT

The RPG Oil & Gas team offers specialised services, with strength in shop fabrication and on-site installation works. We combine proven relevant industry experience in all areas of the live terminal and refinery facilities.

- Above Ground Bulk Storage Tank Design, Construction & Commissioning [API650: API620]
- On-site tank repairs, modifications, inspections [API653]
- Mechanical Works, Fit-out, Testing and Commissioning
- Pipe spooling, installation, Testing and Commissioning
- Product Load-out facilities and Gantries
- Project Engineering and Management
- Project HSE and Quality Management expertise
- Sub-contractor Management of related civil, building and electrical works

The RPG Team has extensive knowledge and experience in undertaking the above works throughout Australia and draw from an expansive list of pre-qualified staff, contractors and vendors in support of successful project delivery. With extensive steel procurement, processing and fabrication facilities RPG can offer turnkey solutions in order to meet clients' individual requirements and project lead times.

RPG works very closely with quality Civil and Earthworks contractors capable of delivering associated works such as tank foundations, compound earthworks, bund wall works and small building works as an extension to our value added services.

RPG Australia's Quality Management System is ISO 9001:2008 SAI GLOBAL Certified

3.0 CORE CAPABILITIES

3.1 SHOP FABRICATED and SITE ERECTED TANKS

- Design & Build
- API650 Tank Build
- API653 Tank Repairs
- Tank Re-locations
- Tank Foundations
- Tank Linings
- Hydro-Testing
- Commissioning

3.2 MECHANICAL / PIPE WORK

- Pipe Spool Installation
- Shop spooling
- Stainless Steel pipe work
- Large Pipe Spool projects
- All related material management/QA/NDT
- All packaging/transport
- Site Installations
- Above/Below Ground
- Wharf Pipe lines
- Pumps/Valves/Separators
- Structural pipe supports
- Mechanical Fit-out
- Hydro-Testing
- Testing / Commissioning

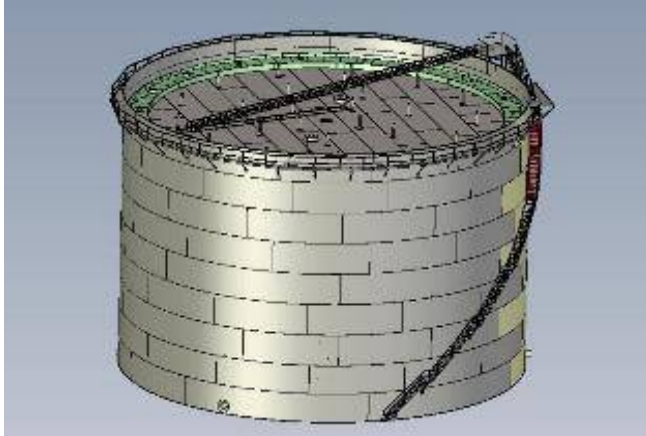

3.3 GENERAL FABRICATION

- Pipe Spooling
- Tanks/Silos/Bins
- Pressure Vessels
- Structural supports
- Walkways / stairways
- Mechanical Skids
- Gas Compression Skids
- Modular Process Skids
- MIG, TIG, GMAW welding
- Stainless Steel
- Light fabrication works
- Detailed shop drawings
- NDT works
- Heat Treatment
- Stress relieving
- Heavy transport
-

3.4 DETAILED ENGINEERING & DESIGN

RPG offers in-house design and engineering services and with the aid of AutoCAD and Solid Works programmes we are able to design and draft to both 2D and 3D formats. The Solid Works modelling software allows us to forecast potential interface issues in tank and pipe work design and make the necessary corrections before procurement and fabrication. Our team works closely with external consultants throughout the process and often undertake shop fabrication drawing work as an added value service.

3.5 PROJECT MANAGEMENT

RPG directly employs a team of suitably qualified and experienced Project Engineers/Managers. Each team member is dedicated to the successful delivery of all project measurements including the successful delivery of HSE and QA/QC management, contract administration and industrial relations. Through clear client interface each Project Manager will deliver projects safely and within each client's tailored requirements.

3.6 SUB-CONTRACTOR MANAGEMENT

RPG Australia is ISO 9001:2008 accredited and that is reflected closely with our approach, selection and working relationship with pre-qualified contractors. Pre-qualification includes a demonstrated proven record of delivering their respective works safely, accurately and within all the constraints of the Head Contract. All sub-contractors and vendors sign on to our Construction Safety Management Plan and project specific plans. RPG is well placed throughout Australia with quality partners in civil works, local shop fabricators, site installation teams and transport companies.

4.0 ENVIRONMENT, HEALTH AND SAFETY COMMITMENT

RPG Australia is committed to providing a secure, healthy, safe working place and environment with safe systems of work, on-going training, competent supervisors and safe plant and equipment. Resources are made available to enable the workshop and sites to comply with all relevant legislation and to ensure the health, safety and welfare of all our personnel and industry partners.

RPG Australia assumes overall responsibility for sub-contractor safety performance. They will, as a minimum, comply with the safety management plan and the procedures established for the project ensuring conformance with all relevant legislation, standards and specifications.

Our current Safety Management manual includes our policies, safe work procedures and emergency response plan and is available at all RPG Australia premises and or sites for inspection on appointment. We use a proactive process of pre-start hazard identification, risk analysis, control measure implementation and on-going training as the major steps in the prevention of accidents and incidents.
