

PIPE & PILING MANUFACTURE

THROUGH GREATER CONTROL OF THE PIPE AND PILING MANUFACTURING SUPPLY CHAIN, RPG IS ABLE TO PROVIDE A COMPETITIVE AND FLEXIBLE SOLUTION THAT SURPASSES IMPORTED PRODUCTS IN TERMS OF QUALITY, LEAD TIME AND FLEXIBILITY.

RPG AUSTRALIA
INTEGRATED STEEL SOLUTIONS

PIPE & PILING MANUFACTURE

RPG'S RICHLANDS AND DALBY MANUFACTURING SITES HAVE BEEN SPECIFICALLY EQUIPPED AND RESOURCED TO FABRICATE LARGE DIAMETER STEEL PIPE AND PILING FOR THE INFRASTRUCTURE, MINING, AND OIL & GAS SECTORS.

With the ability to manufacture in both 'traditional cut, roll and weld' method and 'continuous spiral' method, RPG can fabricate pipe and piling in sizes ranging from 406mm to 4000mm in diameter, thicknesses from 6mm through to 100mm and in lengths of up to 24m. We can fabricate in both standard and non-standard sizes and supply both temporary and structural piles at economical rates against stringent project schedules.

RPG's quality control and continuous improvement focus ensures that our welding processes are compliant with the ASME, BSEN and AS/NZS Welding Standards. We are a certified member of the Welding Technology Institute of Australia - the welding industry's national peak body. Weld testing can also be performed - from ultrasonic through to X-ray to satisfy the most demanding technical specifications.

Where RPG offers a value proposition to clients over offshore supply, is through the integration of fabrication with other capabilities in order to provide a one-stop-shop solution supplied to site on time and within budget.

ADDITIONAL ADVANTAGES IN ENGAGING RPG TO PROVIDE AN INTEGRATED PIPE AND PILING SOLUTION INCLUDE:

- Mitigating the risk of inferior and defective offshore product being provided
- Removing the headache of dealing with multiple offshore & onshore suppliers
- Removing the additional cost of handling & transport across multiple suppliers
- Greater flexibility in capacity to manage tight project scope variations
- Unequaled quality, performance and product integrity

RPG is equipped with state of the art blasting and painting booths, providing the in-house capacity to undertake the highest quality protective coatings and treatments suitable for all environmental conditions including land and severe hazardous marine applications. Booths are fully enclosed and are 40m in length, 8m wide and 6m high to accommodate the largest of product.

With expansive lay down and storage areas, high volumes of completed pipe and piling can be manufactured and stored until such time as they are needed to be transported directly to site.

RPG has formal supplier arrangements with national and international steel suppliers and large national transport and heavy haulage specialists. By adding this sourcing capability to the supply chain clients can transfer the risk of sourcing steel at the correct quality and quantity for the right price and within project timeframes. Access to transport vehicles ranging from standard semi-trailers to complex multi-articulated equipment can be organised suited specifically to the job required within tight timeframes.

With a dedicated Project Manager and access to qualified engineers and design team, RPG will oversee the job in consultation with the client, adding a level of transparency from start to finish. It is this partnership approach enables RPG to offer better flexibility in terms of capacity to manage project scope variations within negotiated timeframes.

RPG's strong commitment to safety, quality and the environment is reflected in the way RPG does business, our products, our service oriented approach and proven safety record.

RPG Australia is an Australian owned leading heavy steel manufacturing and installation organisation that specialises in the delivery of Integrated Steel Solutions. Our focus is to work in a partnership approach with clients and provide tailored solutions that add sustainable value using an integration of capabilities, capacity and expertise.
