

RPG Australia

RPG Australia is a proudly Australian-owned national manufacturer and supplier of specialist heavy steel components across a number of industry sectors, including the power industry.

RPG Australia's key competitive advantage is its ability to offer fully integrated and tailored solutions to clients. RPG has the expertise and capacity to project manage all facets of the client's requirements, including supply steel; cut, roll, bend and fabricate steel; incorporate value-added services to the finished product; and prepare for delivery to any metropolitan or regional area within Australia.

With strong ties to the manufacturing, infrastructure and mining sectors, RPG Australia is now playing a leading role in the manufacture of infrastructure associated with the renewable energy sector through its significant wind tower manufacturing capability.

Managing Director Mike Lewis believes the energy sector is where RPG will secure future long term growth.

"We've got a foothold in the renewable sector through wind, but we are also looking to a future in wave, solar and

other energy technologies where we can add value", he said.

With two centres dedicated to wind tower and heavy engineering manufacture strategically located within South Australia and south-east Queensland, RPG Australia is the nation's largest integrated wind tower manufacturer. Each centre has been purpose built and has the in-house expertise, technology and capacity to respond to the market's expanding requirements in both tower volume and size.

Involvement in past projects has allowed RPG Australia to foster close ties with many of the leading international wind energy companies and has seen the company work on many of the critical assets owned and operated by the nation's major power generation companies. Sites include Starfish Hill, Lake Bonney, Wattle Point, Hallett, Snowtown, Cathedral Rocks, Capital, Canunda, Mount Millar, Hopetoun, Kalbarri, Denham, Hallett Hill and Clements Gap wind farms.

RPG Australia is also currently contracted to Rolls-Royce as part of the Defence SA project being developed in South Australia to support the building of the new air warfare destroyers and other ship building projects.
